

## **Körber and inmation announce partnership for data-driven shop floor integration in the pharma factory of the future**

**Lüneburg / Köln, Germany, 9 September 2021. Körber offers its customers a best-practice solution by adding a state-of-the-art historian function to the Werum PAS-X MES Suite, which enables archiving of structured data. With their partnership, Körber and inmation are striving to achieve a high degree of integration on the shop floor in brownfield pharmaceutical production.**

Körber, the world's leading supplier of Manufacturing Execution Systems (MES) for the pharmaceutical, biotech and cell & gene therapy industries, and inmation, a technology leader in global real-time information management, announce their partnership.

“With this agreement, we continue to pursue our best-of-breed partnership strategy and will offer our clients all components for Pharma 4.0 in a one-stop-shop,” says Jens Woehlbier, Chief Executive Officer (CEO) Software of Körber Business Area Pharma. “The solution enables a high level of integration in pharmaceutical production in a fast and cost-effective way. This provides customers with an integrated MES-historian solution from a single source, helping them move towards a data-driven future.”

“Our software solution enterprise:inmation has seen spectacular growth in the regulated life science industry recently,” explains Timo Klingenmeier, CEO of inmation Software. “One of the main drivers for our customers is the platform’s ability to integrate all production systems and create a fully contextualized ‘digital twin’ of pharmaceutical production data. The MES plays a key role in the system orchestration, and we are very proud to enter into a close partnership with Körber, the leader in the field. We will further drive the integration of both platforms and align closely to leverage both companies’ strength for the next-generation system architecture in life science,” adds Klingenmeier.

### About inmation Software

Headquartered in Cologne, Germany, inmation Software GmbH is one of the world's leading technology companies in the field of global and industrial real-time information management. Solutions such as enterprise:ination are geared towards creating the real-time infrastructure for a holistic monitoring system of all data collected, as well as keeping Total Cost of Ownership (TCO) low whilst levels of networking become increasingly powerful. The scalable software adapts to the needs of customers and is able to integrate manufacturer-independent machines and components – from a micro installation for a single host to company-wide solutions with hundreds of systems on different continents. The continually growing, global client base is made up of leading companies operating in different industry sectors. Furthermore, inmation Software, in partnership with regional and international companies, is the contact point for manufacturing companies looking to effectively and sustainably realize 360° integration and full enterprise control.
